Instructions

1. Print with 100% scaling, make sure the printing dimensions are correct by using a 1€ coin or a ruler
2. Cut and fold precisely following the guide lines
3. Put the measuring tool on the side of your door and place the side with the arrow on the door
4. Use the screw of the lock to measure the width of your door
5. Flip the tool and repeat the process on the other side.

The width of the door is composed of two measurements, one taken from the inside and one from the outside.

Use the mounting screw placed on the side of your door as a reference point.

The resulting length is the one with the middle of the screw within its range.

In the image the length is : 35
